Email: *sagar.joglekar[at]gmail.com*

EDUCATION

- **Ph.D, Computer Science**
  King's College, London, UK, 2019

- **Masters of Science, Electrical and Computer Engineering**
  University of California, Santa Barbara , CA , USA, February 2012

- **Bachelors of Engineering, Electronics Engineering**
  University of Pune, India, May 2008

CITIZENSHIP   Indian

VISION   Continuously learn and grow as a researcher and a leader, in order to create positive global impact.

RESEARCH INTERESTS   Representation learning, Complex networks, Deep learning and applications for user behaviour analysis , Natural language processing

PROFESSIONAL EXPERIENCE

Research Scientist, Nokia Bell Labs, Cambridge, UK   06/2019 – Present

As a member of the Bell labs Social dynamics team, I have been working on questions that try to redefine our relationship with data. I primarily work on problems pertaining to data and statistical science. More specifically, I conduct research on data driven methods, for solving problems in the fields of social dynamics and urban informatics.

Ph.D. Fellow, King's College, Dept. of Informatics   09/2015 – 09/2019

My research at King's dealt with developing new methods for quantifying the intangible human processes from web scale data. I built on and developed new methods in the fields of complex networks, machine learning and computer vision. The direct outcome was a set of published frameworks which can quantify the subjective human perceptions – like the sense of beauty, safety and emotional support – from large scale data.

Research Intern, Nokia Bell Labs, Cambridge, UK   06/2017 – 11/2017

As a part of my summer Internship at Bell labs, I worked on explainable and visualizable deep learning models for quantifying the perception of intangible attributes like Beauty, safety and liveliness.

Head of Research, Firedrop.ai   05/2016 – 06/2017

I conducted research in order to understand feasibility of different machine learning algorithms for Firedrop products. I helped the team adopt advanced machine learning research into systems that solve optimization problems. The end goal was

always to provide most value to the customers by augmenting different creative processes in packaging design, website design, and more.

Research Associate, Blizzard Institute , QMUL   06/2016 – 11/2016

I was working as a principle researcher for a project supported by Blizzard Institute at QML. The work involved studying message exchange topology of medical community networks to understand health of communities and support processes. There are publications in progress which are the output of this work.

Hacker/Data science consultant, HackMasters   03/2016 – 05/2019

I have worked with HackMasters as a part of their team, on several miscellaneous projects. I primarily work with them in the capacity of a data scientist/engineer. Projects may cover areas of data governance , data driven strategy or designing/prototyping new data driven systems for their clients, which include government enterprises, large consultancy firms or private sector firms.

Senior Software Engineer, Citrix Systems   02/2012 – 09/2015

My job at Citrix dealt with design and implementation of proprietary communications stack and platform libraries for Android, iOS and the web. As a team we work on implementing Citrix's client side network communications platform code. Some of the salient projects I have contributed to are as follows:

- I was a major contributor in design and development of the communications platform for our newly launched GotoMeeting web client. I designed and implemented a brand new protocol for bandwidth and computationally efficient screen sharing on HTML5 and mobile.
- Develop platform communications stack for iOS that presents an API for products to exercise and communicate with Citrix infrastructure. The platform is currently used in Citrix SaaS products like Convoi, Talkboard and GotoAssist, for audio and screen sharing media communications.
- As a part of Citrix hack-week 2013, I along with two other hackers came up with an idea to hack GotoAssist mobile endpoints and add camera stream sharing and annotations with Audio communication. This morphed the existing GoToAssist product into a tool to support real world use cases. The feature has now been incorporated and marketed as GotoSeeit

Summer Intern, Citrix Systems   06/2011 – 12/2011

My internship dealt with porting and modification of proprietary runtime communication libraries and automated testing frameworks for Android.

Systems And Bio Imaging Lab, UCSB   01/2011 – 06/2011

As a Graduate student researcher, I worked on research and development of a system to incorporate HDR imaging in biological fluorescent microscopy. This project was part of my research at Systems and Bio-Imaging Lab at UCSB. The main aim of this project is to enable High Dynamic Range microscopy for dynamic samples.

Research Engineer, Infosys Research Labs, India   07/2008 – 07/2010

My job dealt with research and development of algorithmic solutions, exploring possibilities and conducting research in Digital Convergence. One of my major respon-

sibilities was research, design and development of some intellectual properties and solutions that involve Computer vision based algorithms

PATENTS

- Varadharajan, V., **Joglekar, S.**, Nallusamy, R., & Paul, S. (2014). U.S. Patent No. 8,885,871. Washington, DC: U.S. Patent and Trademark Office.
- Dhanapal, K. B., Somasundara, A. A., **Joglekar, S. P.**, Narang, A., & Paul, S. (2011). U.S. Patent Application No. 12/895,027.

ENGINEERING TOOLS

- Programming languages: Python , Java , C++ , Javascript
- Graph mining: GiRaph , NetworkX , Gephi , Spark
- Machine Learning frameworks: TensorFlow, Theano, Caffe, ScikitLearn
- Back-end: Nodejs , Django, Flask, Mongodb

GRANTS & AWARDS

- **King's India Scholarship**
  My Ph.D. was supported by this award. King's graduate school awards this scholarship to one Indian citizen every year, to pursue scientific research.
- **Connected nations Pioneers-Finalist**
  My work on Deep learning driven urban beautification, done with Bell labs UK, is among the top 16 projects selected across the UK for this prize. The project is in the top 4 in the Creative computing category.
- **Nvidia GPU grant**
  Wrote and received the Nvidia GPU grant that awards a better compute infrastructure to do representation learning research.

TEACHING EXPERIENCE

- **Mentorship , King's MSc projects** I have been involved on providing mentorship and guidance to several MSc projects at King's college London
- **Teaching assistant , Complex Networks Analysis (September 2016- December 2016):** I conducted tutorials and occasionally taught the course of complex networks analysis for business department at Queen Mary University of London
- **Teaching assistant Physics (Jan 2011-June 2011):** I assisted in teaching and conducted tutorials for Astronomy 1 course offered by the Physics department at UC Santa Barbara.
- **Visiting Guide and Mentor (Dec 2009-March 2010):** I mentored a group of 20 students for Robotics Forum (VIT) sponsored project to develop a hardware development platform for computer vision based robotics.
- **Lecture series (12 hrs.) on Computer vision using MATLAB and OpenCV (2008,2009):** Lecture series conducted for Robotics forum and for third year Engineering students in VIT for introduction to Image processing and use of *MATLAB* for computer vision/Image processing.
- **GMRT, Functioning and Signals processing involved (2008):** Seminar covered a comprehensive explanation of Radio telescopes and the Signals processing involve
